HOMEPODMINI

The HomePod mini is Apple's compact smart speaker, standing just 3.3 inches tall yet delivering surprisingly full, room-filling 360-degree sound. A full-range driver paired with dual force-cancelling passive radiators produces deep bass and crisp highs, while Apple's computational audio continuously tunes the sound in real time based on the music being played. The exterior is wrapped in a seamless, acoustically transparent mesh fabric, with a backlit touch surface on top for quick playback and volume control. A four-microphone array enables reliable far-field Siri recognition even with music playing, and Siri can recognize up to six different voices in a household to deliver personalized results. Two or more HomePod mini speakers can be placed around the home for multiroom audio via AirPlay, or paired together in the same room as a true stereo pair. The speaker also functions as a smart home hub, working with HomeKit and Matter-enabled accessories, and includes a built-in temperature and humidity sensor. It connects over 802.11n Wi-Fi, Bluetooth 5.0, Thread, and includes an Ultra Wideband chip for seamless handoff with nearby iPhones. HomePod mini is available in five colors: White and Midnight.

HomePod2

The HomePod (2nd generation) is a powerhouse smart speaker that combines immersive high-fidelity sound with the intelligence of Siri and the privacy Apple is known for. A 4-inch high-excursion woofer with 20mm of excursion delivers deep, rich bass, while a beamforming array of five horn-loaded tweeters — each with its own neodymium magnet — produces detailed, articulate sound with stunning clarity. An internal low-frequency calibration microphone and Apple's computational audio engine continuously sense the room and tune output in real time, so the sound adapts to wherever it's placed. HomePod supports Spatial Audio with Dolby Atmos, can be paired as a stereo set with a second unit, and works in multiroom setups across other HomePod speakers.

JBL

JBL

Go5

Big vibes, pocket-sized. The JBL Go 5 packs serious audio power into a palm-sized casing, delivering legendary JBL sound with crystal-clear details and deep, rich bass that feels louder than it should from something this small. New ambient edge lighting adds a soft glow with selectable themes and visual cues for power, pairing, and battery status, and up to 10 hours of battery life (8 hours, plus 2 more with Playtime Boost) keeps it going from morning to night. It's IP68 rated — waterproof, dust-proof, and drop-proof — so a surprise rain shower or an accidental fumble is never a concern. Bump two Go 5 speakers together to link them via AirTouch for true stereo sound, or use Auracast to pair with other JBL Auracast-enabled speakers for an even bigger sound. The JBL Portable app rounds out the experience with further customization.

Boombox4

The all-new JBL Boombox 4 is bigger, bolder, and better than ever, delivering powerful JBL Pro Sound with deep, thumping bass. Two 5-inch woofers, two 0.75-inch tweeters, and three passive radiators (two circular, one racetrack) work together so every track hits harder and sounds cleaner, while AI Sound Boost analyzes the music in real time and adjusts the sound to give more power with less distortion, even at full volume. Two Bass Boost settings let users switch between deep and punchy bass to match the mood. The classic Boombox design gets a fresh upgrade here — larger, but lighter, so it travels easily to the beach, the block, or the backyard. It's IP68 waterproof and dustproof, so weather is never a dealbreaker, and delivers up to 34 hours of playtime (28 hours standard, plus 6 more with Playtime Boost). Auracast™ lets users stereo pair two Boombox 4 units or link multiple Auracast-enabled JBL speakers to the same playlist. A USB-C port supports lossless audio playback for listeners plugged into a laptop or compatible source, and the battery is user-replaceable in three simple steps (spare battery sold separately). The housing uses post-consumer recycled plastic and recycled fabric for the grille, and it ships in FSC-certified paper packaging printed with soy ink.

PartyBox130

The JBL PartyBox 130 is a portable party speaker built for backyard get-togethers, pool days, and any celebration that needs serious sound. It delivers 200W RMS of JBL legendary sound through a pair of 5.2-inch woofers and two 1-inch tweeters, with a frequency response of 40 Hz–20 kHz. JBL's AI Sound Boost technology keeps bass powerful and distortion-free even at high volumes, and a redesigned lightshow adds strobe edge lighting and vibrant effects synced to the beat. The speaker offers up to 15 hours of playtime on a full charge, with a quick 10-minute charge delivering another 80 minutes of listening — or swap in a spare JBL Battery 200 (sold separately) to keep the party going. A foldable ergonomic handle makes it easy to carry, and an IPX4 splashproof rating means spilled drinks or light rain won't stop the music. Guitar, mic, and aux inputs let it double as a karaoke machine or backyard PA system, and Bluetooth 6.0 with Auracast™ support lets you sync multiple JBL Auracast-enabled speakers together for bigger, wider sound. Everything can be controlled remotely through the JBL One App.

PartyBox520

Got big plans that call for big sound? The JBL PartyBox 520 sets the mood with a vibrant lightshow and JBL's biggest, boldest, thumping sound yet, powered by AI Sound Boost to help get everyone moving. Two 7.5-inch woofers and two 1-inch dome tweeters push out 400W of output power, with a frequency response of 40Hz–20kHz. Despite the heavy sound, the speaker is easy to move thanks to a grippy telescopic handle and wide, sturdy wheels — smooth rolling whether it's headed to the backyard, the pool, or wherever the party lands. Splashproof to an IPX4 rating, it's built to handle the spills and fouts of a raucous party. It delivers up to 15 hours of playtime on a charge (with a 10-minute quick charge adding 2 more hours), and the battery is replaceable when it's time for a fresh one (sold separately). Two XLR inputs make it easy to plug in a microphone, guitar, or DJ console, and a built-in karaoke function turns any gathering into a sing-along. USB-C supports high-quality streaming and karaoke app audio, and the JBL PartyBox app puts music, EQ, and the lightshow in the palm of your hand. Pair two PartyBox 520 units for true stereo sound via Auracast™, or link with other Auracast-enabled JBL speakers to scale the sound to the size of the crowd. The housing uses post-consumer recycled plastic, and it ships in FSC-certified paper packaging printed with soy ink.

BEATSPILL

The upgraded Beats Pill is seriously loud — and seriously portable. A bigger, bespoke racetrack woofer pushes 90% more air than before for deeper, fuller bass, aided by upgraded neodymium magnets delivering 28% greater motor force; a redesigned tweeter sits in its own housing for extra stability, delivering crisp highs and rich mid-range tones while letting the woofer focus on bass and lower mids. The result is powerful, room-filling sound with better tonality across the spectrum. It's IP67-rated to keep out dust and water, with enhanced internal seals built to handle the pool, the beach, or the rain. A 20-degree upward tilt directs sound toward the listener, and a removable lanyard plus soft-grip silicone backing make it easy to carry anywhere. Battery life reaches up to 24 hours per charge, and Fast Fuel gives up to 2 hours of playback from a 10-minute charge. USB-C handles charging, universal device charging (you can top off your phone from the Pill), and high-resolution lossless audio when connected to a compatible source. A proprietary chip gives instant one-touch pairing and Find My / Find My Device support on both iOS and Android, and industry-leading Class 1 Bluetooth extends range with fewer dropouts, including full speakerphone functionality. Two extra play modes — Amplify Mode (sync two Pills for a bigger, unified sound) and Stereo Mode (split left/right across two units for a surround feel) — let owners scale the experience. Packaging is made from 100% fiber sourced from sustainably managed forests.

POWERBEATSFIT

Powerbeats Fit are Beats' next-generation true wireless workout earbuds, built around a redesigned secure-fit wingtip that's nearly 20% more flexible than before for a locked-in fit that holds through intense workouts without wobbling or shaking loose. Active Noise Cancelling and Transparency Mode let listeners block out the world or stay aware of it, while Adaptive EQ (using up to five microphones) tunes sound to each ear's fit and seal when both modes are off. Personalized Spatial Audio with dynamic head tracking adds an immersive layer for music, movies, and games.

PowerbeatsPro2

Powerbeats Pro 2 are Beats' next-generation true wireless sport earbuds, built around a redesigned earhook reinforced with a super-light nickel-titanium alloy prized for its shape memory and flexibility — 20% lighter than the original Powerbeats Pro and refined through more than 1,500 hours of testing with nearly 1,000 athletes for what Beats calls its best-fitting headphone yet. Active Noise Cancelling and Transparency Mode handle focus versus awareness, Adaptive EQ continuously tunes sound to each ear's fit and seal, and Personalized Spatial Audio with dynamic head tracking adds an immersive layer — Powerbeats Pro 2 is also the first Beats product to support ultra-low-latency Lossless Audio with Apple Vision Pro.

BOSE

Bose

QCULTRAHP

The QuietComfort Ultra Headphones (2nd Gen) are Bose's flagship over-ear headphones, engineered with the brand's best-ever noise cancellation and spatialized audio for genuinely immersive listening. Next-gen ActiveSense technology smooths out sudden spikes in noise, while CustomTune personalizes the sound profile to the unique shape of your ears. Choose Quiet Mode for maximum noise cancellation, Aware Mode to let the outside world in, Bose Immersive Audio to spatialize your music, or the all-new Cinema Mode, which spatializes and balances surround sound and dialogue for a movie-like experience on the go. The refreshed design pairs plush, evenly-pressure-distributing ear cushions with polished metal hardware and an inlaid logo for a genuinely premium look and feel. Battery life runs up to 30 hours in Quiet or Aware Mode (23 hours with Immersive Audio on), with a 15-minute quick charge adding 3 more hours, and an included USB-C cable lets you listen while you charge. An optional wired connection delivers lossless audio for critical listening.

BoseQC

Bose QuietComfort Headphones pair legendary noise cancellation with high-fidelity audio in a classic, comfortable over-ear design. Quiet Mode shuts out the world for maximum focus, while Aware Mode lets ambient sound blend in when you need it — or build a custom mode in the Bose app that mixes noise cancellation and EQ exactly how you like it. A Wind Block setting keeps calls clear in windy conditions, and adjustable EQ lets you dial in bass, mid-range, and treble to taste. Plush earcups soften the fit while a steel-reinforced headband keeps things secure through long listening sessions, and up to 24 hours of battery life (with a 15-minute quick charge adding 2.5 more hours) means it keeps pace with a full day. An included audio cable with in-line mic covers situations without Bluetooth, and SimpleSync compatibility lets it pair with a Bose soundbar for private late-night viewing.

SoundLinkMax

Don't let its size fool you — the back-and-better-than-ever SoundLink Micro (2nd Gen) is deceptively small but delivers surprisingly powerful, crisp sound with impressive bass. Compact enough to fit in the palm of your hand, this tiny-but-tough speaker is built to keep up with an active lifestyle: it's drop and shock resistant, and its IP67 rating means it's fully water and dustproof, so it performs reliably rain or shine, poolside or on the trail. A redesigned, more versatile utility strap makes it easy to clip onto a bag, bike, or belt loop and take anywhere. Inside, advanced Bluetooth 5.4 connectivity delivers a stable signal up to 30 feet, with multipoint support that lets it stay paired to two devices at once. Pair two units together for Party Mode or Stereo Mode, and fine-tune the sound to taste with adjustable EQ through the Bose app. Up to 12 hours of battery life on a single charge (via USB-C, roughly 3 hours to fill up) means it's ready for a full day of use without needing to be tethered to an outlet.

SoundLinkMax

The Bose SoundLink Max Portable Speaker takes the party anywhere with big, room-filling stereo sound and deep, powerful bass in a rugged, go-anywhere build. It features a removable rope handle for easy carrying (a shoulder strap is sold separately) and a durable IP67-rated exterior that resists dust and water. A 3.5mm aux input adds a wired option alongside Bluetooth streaming, and its USB-C port doubles as a charge-out source for topping off a phone or tablet on the go. Through the Bose app, users can link two SoundLink Max speakers — or pair with other compatible Bose Bluetooth speakers — in Stereo Mode or Party Mode for synced audio across a group of up to 20 people.

SoundLinkPlus

The Bose SoundLink Plus Portable Speaker delivers bold, resonant audio with booming bass in a rugged, portable design. It's built with a powder-coated steel grille and soft-touch silicone exterior rated IP67 for dust and water resistance, plus shock and rust resistance — durable enough to survive drops, spills, and even accidental submersion for up to 30 minutes. A rugged utility rope loop makes it easy to carry or clip to a bag. Through the Bose app, users can fine-tune sound with Adjustable EQ, program a shortcut button, and link two SoundLink Plus speakers in Stereo Mode, or connect with other compatible Bose speakers (SoundLink Micro 2nd Gen, Flex 2nd Gen, or Max) in Party Mode for synced audio across a group of up to 15 people.

UltraOpen

The Bose Ultra Open Earbuds are a new kind of wearable audio device — a cuff-shaped earbud that wraps around the ear rather than plugging into or over it. This open-ear design leaves ears completely uncovered, letting wearers stay aware of their surroundings while Bose's proprietary OpenAudio technology delivers rich, private sound aimed directly into the ear canal. The flexible joint and lightweight grip provide a secure, all-day-comfortable fit designed to stay put during workouts, runs, or everyday wear. Immersive Audio adds a spatial, all-around sound experience, and the Bose app allows further personalization through adjustable EQ controls for bass, mid-range, and treble. Bluetooth multipoint connectivity lets the earbuds connect to two devices simultaneously, and SimpleSync allows seamless pairing with compatible Bose soundbars and speakers. Battery life runs up to 7 hours per charge (up to 4 hours with Immersive Audio or Auto Volume enabled), with the charging case providing up to an additional 19.5 hours, and up to 48 hours of standby time. The earbuds carry an IPX4 water-resistance rating, with acoustic mesh protecting against moisture and debris, making them durable enough for sweat, splashes, and light rain.

QuietComfort

The Bose QuietComfort Earbuds deliver an everyday listening experience that's powerful, not precious, pairing rich, hi-fidelity sound with renowned Bose noise cancellation in a compact, durable in-ear design. Adjustable noise control lets users switch between Quiet and Aware modes to block out or let in the world as needed, while an IPX4 water- and sweat-resistant build handles rain, sweat, and splashes. A trio of eartip and stability-band sizes (nine total combinations) locks in a secure, all-day fit. Battery life reaches up to 8.5 hours per charge, and the wireless-charging-compatible case holds 2.5 additional charges for up to 31.5 hours of total listening time; a full charge takes about 1.5 hours over USB-C. Bluetooth multipoint lets users switch seamlessly between two connected devices, and the Bose QCE app unlocks five-band adjustable EQ, customizable touch controls, voice commands, and remote-selfie capability.

Additional Premium Audio

STUDIOPLUS

Beats Studio Buds+ are true wireless earbuds built for powerful sound and a perfect fit. A custom acoustic platform with a two-layer transducer delivers rich, immersive sound with cleaner bass and ultra-low distortion, while three redesigned acoustic vents improve audio precision and relieve ear pressure for all-day comfort. Active Noise Cancelling adapts to the wearer's personal fit and now delivers up to 1.6x more noise-cancelling power, thanks to 3x larger microphones and a more powerful processor; Transparency mode blends the outside world back in with up to 2x the improvement over the prior generation. Spatial audio with Dolby Atmos adds an immersive, surround-sound listening experience. The earbuds are IPX4 sweat and water resistant and offer up to 36 hours of total listening time (up to 9 hours from the earbuds plus three additional charges from the pocketable case), or up to 24 hours with ANC or Transparency mode running. Fast Fuel gives up to an hour of playback from just a 5-minute charge. A single multi-function "b" button on each earbud controls music, calls, and voice assistant, and industry-leading Class 1 Bluetooth extends range and cuts dropouts. Native features cover both ecosystems: one-touch pairing, "Hey Siri," and Find My on Apple devices; Google Fast Pair, Audio Switch, and Find My Device on Android. Four ear tip sizes (XS, S, M, L) help fit a wide range of ears for a secure, comfortable seal. Packaging is made from 95% plant-based material sourced from recycled fiber and/or sustainable forests.

QCUltra

The Bose QuietComfort Ultra Earbuds (2nd Gen) are Bose's flagship true wireless in-ear earbuds, built for premium, personalized sound and the brand's best in-ear noise cancellation. Bose CustomTune technology calibrates audio to the unique shape of each ear for a more balanced, authentic listening experience, while Quiet Mode delivers class-leading noise cancellation and Aware Mode's updated ActiveSense technology smooths sudden loud sounds without drowning out music. Bose Immersive Audio spatializes sound for a wide, natural soundstage, and the new Cinema Mode extends that spatial technology to video content for a theater-like feel. Calls benefit from SpeechClarity, an AI-based noise-rejecting microphone system, along with improved background-noise suppression over the original QuietComfort Ultra Earbuds.

Additional Premium Audio

EUHOMY02

The EUHOMY 12 Volt Refrigerator (37QT/35L) is a compact, single-zone portable electric cooler built for the road, campsite, or job site. Powered by a high-efficiency variable-frequency compressor, it cools from -4°F to 68°F (-20°C to 20°C) and offers both an energy-saving ECO mode and a fast-cooling MAX mode. The unit runs on 12/24V DC or 100-240V AC, making it equally at home plugged into a vehicle, boat, or standard wall outlet, and includes 3-level battery protection (L/M/H) to prevent overloading or draining a vehicle's battery. Inside, an aluminum-film lining helps retain temperature, while the wear-resistant composite outer casing protects the unit in transit. A large main compartment, two removable storage baskets, and a removable divider keep food and drinks organized, and the fridge operates at roughly 40 decibels for quiet operation. Built-in off-road wheels and dual handles make it easy to move between the vehicle, campsite, or hotel room, and an anti-shake design keeps it stable on rough terrain up to a 30-degree grade. A simple LCD control panel handles temperature adjustments, and the unit ships with both a 110/240V AC adapter and a 12/24V DC power cord, plus 2-year manufacturer tech support.

EUHOMY01

The EUHOMY Countertop Ice Maker makes fresh, bullet-shaped ice in just 6 minutes flat. A 1.2L water tank and powerful compressor produce up to 26.5 lbs of ice per day, holding up to 1.3 lbs at a time, and the smooth bullet-shaped cubes are gentle enough for cold drinks, iced coffee, or chewy snacks without hurting hands or teeth. An infrared sensor manages the whole process — an "ICE FULL" indicator flashes when the basket needs emptying, and an "ADD WATER" alert lets you know when it's time to refill. A one-touch auto-cleaning cycle (just hold the ON/OFF button for 5 seconds after adding water) runs a 30-minute self-clean without any manual scrubbing. At under 45dB, it runs about as quietly as a working freezer, and a large see-through window lets you watch the ice form. It weighs just 13 lbs and comes with a sturdy carry handle, making it genuinely portable between kitchen, camping trip, RV, dorm, or party setup.
